

## RECYCLE MASTER M2 - A PROVEN PARTNER FOR MUNICIPAL WASTE TRANSPORTATION

The **Recycle Master M2** is a hook trailer dedicated to transporting roller containers that comply with DIN 30722. The vehicle is used in the transportation of municipal waste. The semi-trailer has a straight frame made of S700 steel and side guidance of container rollers. The tread of this model of subcontainer trailer is 7m long. The modern frame design is distinguished by its solidity and rigidity, which guarantees stability on the road and safety. The vehicle's durability and increased lifespan was achieved by using KTL cataphoresis painting technology in its manufacture.

The Recycle Master M2 model, which is part of the Polish manufacturer's lineup of hook trailers, is equipped with an pneumatics control panel and side guidance of the container rollers, which contributes to stability and safety during loading. The vehicle features an optimized unladen weight. Depending on the configuration, M2 hook trailer can weigh as little as 3,700 kg and transport 14.3 tons of cargo.

The Wielton hook trailer was constructed in response to customer needs. It can be equipped with Heavy Duty axles with reinforced beam and cylinder, air suspension from reputable manufacturers, and an air container lock to guarantee safe use and transportation. Wielton offers a wide range of configurations and accessories for its products, and the customer has the opportunity to customize the vehicle. The range includes drum or disc brakes, 19.5" or 17.5" wheels, as well as drawbars of various lengths (Fi 40 and Fi 50) and many other top-class components from manufacturers such as: SAF, BPW, WABCO, MICHELIN or HELLA.

The Recycle Master M2 can be viewed at NUFAM 2023 at Wielton's outdoor booth.
